We are all Astronauts

2015

C-type prints

4 framed photographs, each 25x25 cm (edition of 5)

We are all Astronauts documents four global locations that are at equal latitude and separated by exactly 90degrees in longitude. Through a year long process of research and email conversations four locations in Mozambique, Central Brazil, Western Australia and French Polynesia were mapped and then visited by local collaborators. Each location was precisely identified with longitude and latitude co-ordinates and then visited using hand held GPS. At each site a right-angled marker made of local wood has been erected to form the four corners of this international project. Before leaving the sites each corner was documented facing true north to form the above series of photographs.
